## Facts and figures

Project Type: **Coordination and Support Action**

Project duration: **26 months (01/01/2020 – 28/02/2022)**

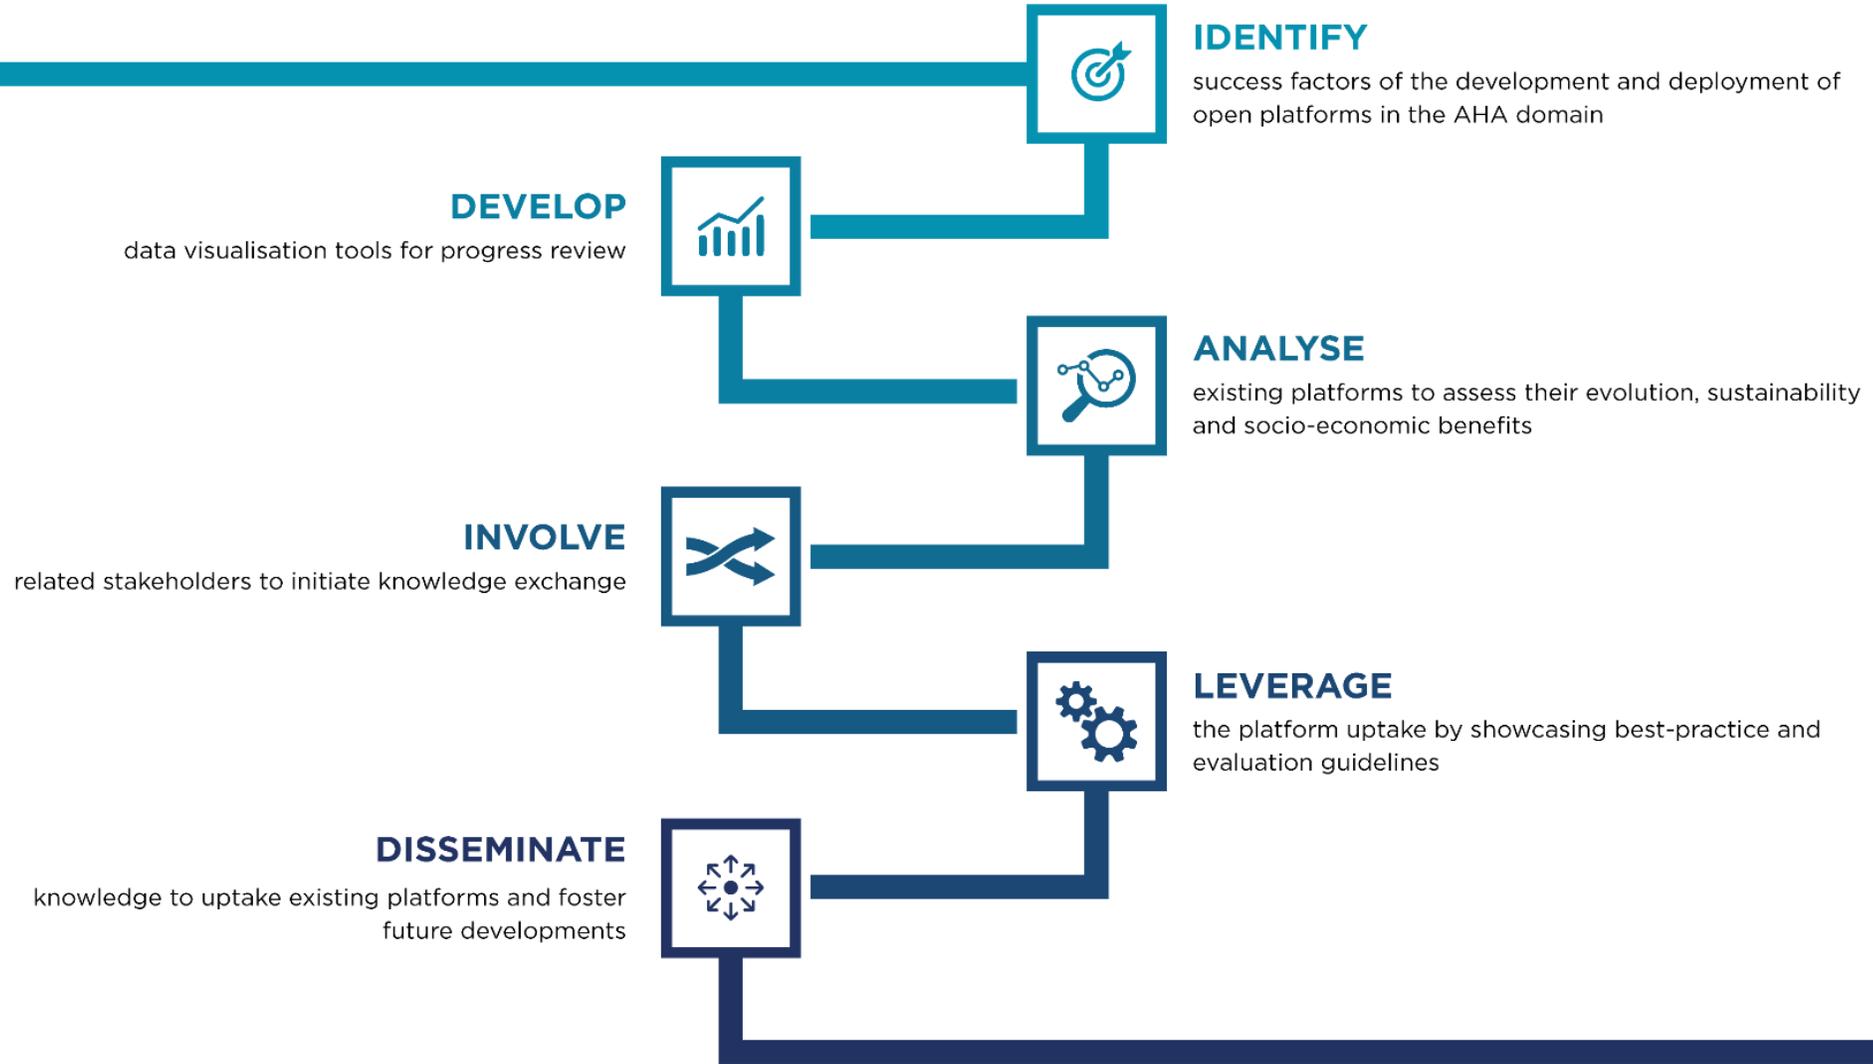

Person months: **172**

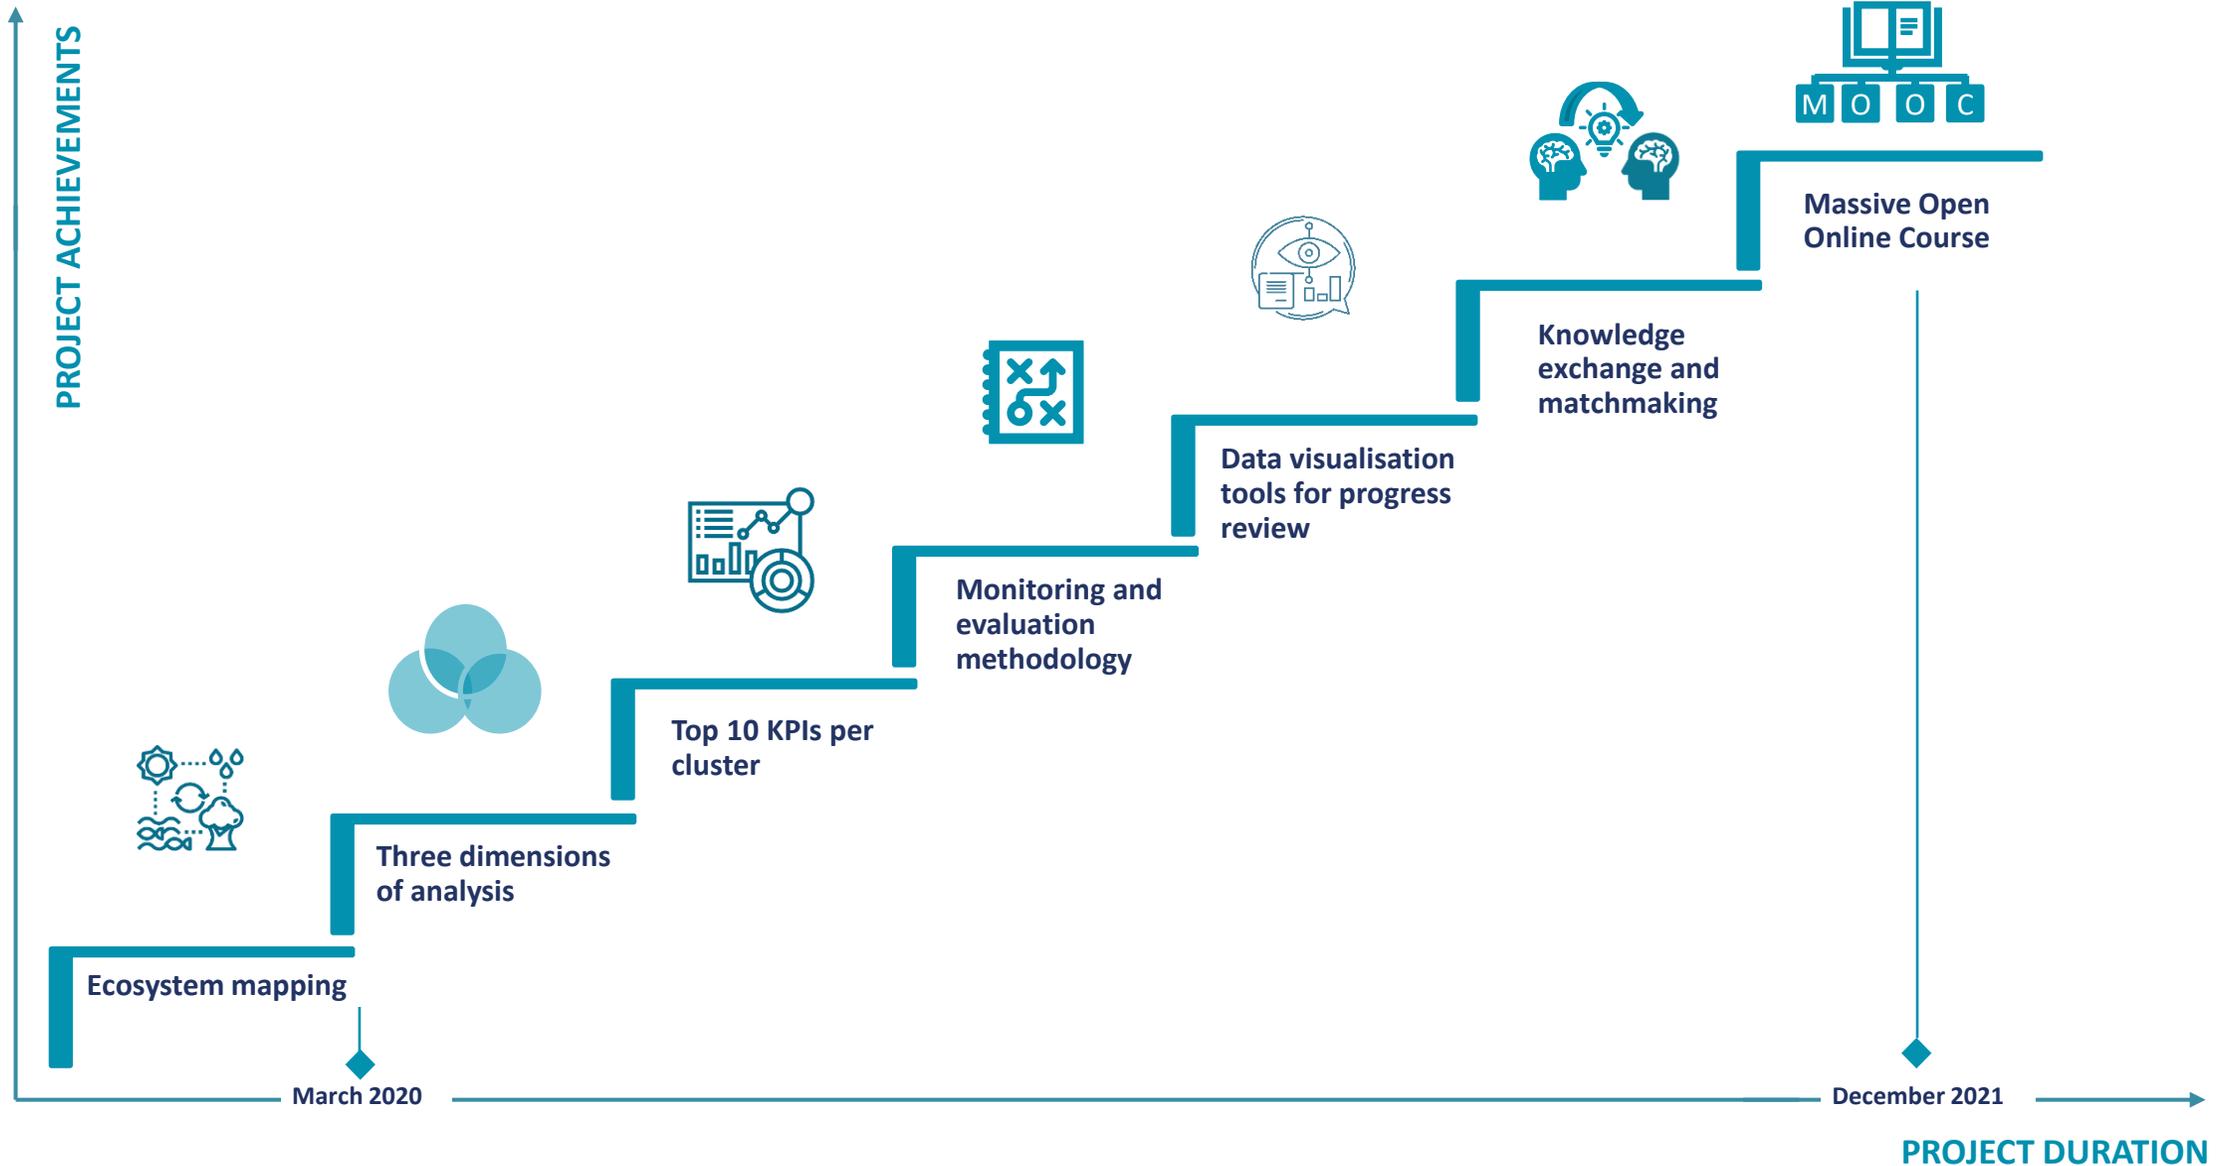

Partners: **12 from 10 countries**

Due to the persisting fragmentation of the active and healthy ageing market; and the lack of interoperability of the various solutions deployed or difficulties with the large scale uptake of the platforms by their targeted users, the aim of the PlatformUptake.eu project is to **observe, analyse and understand the whole ecosystem of open service platforms and their related networks**, and depict a picture describing the whole ecosystem with its **achievements and potentials**, targeting all user groups while also **generating synergies among platforms and their related projects** in the AHA and IoT domain.

**Important**

## Matchmaking Events!

## Networking Opportunities

### PlatformUptake.eu Consortium

12 consortium organisations and connected networks (Universities, SMEs, End user organisations)

### 10+ Projects events

Matchmaking, MOOCs, Open Information Hub Tools, Capability gaps and Innovation needs and more

### 45+ Projects and initiatives

AHA, ALA, Health care, IoT etc.

### Networks

IEEE, CEN, IN4AHA, IDIH, 50plus Hellas, SHAFE, Nerosubianco, EEN, NET4Age, ECHalliance etc.

### Locations

10 countries in Europe

# Privacy Symposium Mission and Objectives

The Privacy Symposium aims at promoting international dialogue, cooperation, and knowledge sharing on data protection and compliance.

## Priority Objectives

- Knowledge sharing
- Dialogue and cooperation
- Enhancing data protection compliance

# Main Focus

- Latest evolutions in data protection regulations
- International cooperation and convergence in data protection
- Emerging technologies and data protection compliance such as artificial intelligence, Blockchain, Internet of Things, etc.
- Future needs and demands in data protection and compliance services
- Research and innovation in data protection and compliance domains

# Key Partners

- Council of Europe
- Ca' Foscari University of Venice
- European Centre for Certification and Privacy (ECCP)
- European Law Students' Association (ELSA)
- European Cyber Security Organization (ECSO)
- European Federation of Data Protection Officers (EFDPO)
- Italian Institute for Privacy and Data Valorisation (IIP)
- Italian Association for Cyber Security (CLUSIT)
- IoT Forum
- NGIoT (H2020 project)
- Mandat International
- IoT Lab
- Dunavnet
- Archimede Solutions
- Gatekeeper (H2020 project)

# Guiding Principles

- International dialogue and cooperation
- Excellence
- Addressing the latest developments and future needs
- Research and Innovation friendly
- Open and respectful debates
- Creating value for the participants
- Building an international community of professionals
- Data Protection by Design (walk the talk)
- Co-creation

# PROGRAMME OVERVIEW

Tuesday, 5th April 2022

This project has received funding from the European Union's Horizon 2020 Research and Innovation Action under Grant Agreement No 875452.

## Description of the organisation

We believe in what makes people happier

ProSelf, as a social tech company provides solutions within the area of **mental health**, built based on Health Psychological Models, Positive Psychology and persuasive technology, and is supported by an AI & Human in the Loop methodology.

ProSelf's **personalised healthcare vision** is Patient focus, Personalisation, Digital health solutions, Patient engagement, Holistic approach, AI and human in the Loop.

As a result of this vision, ProSelf developed a **digital mental health application and social platform** -called ProSelf - for mainly older adults, which helps the users to live an active and healthy life with science based measurement tools and mental health (emotional, social, cognitive) activities.

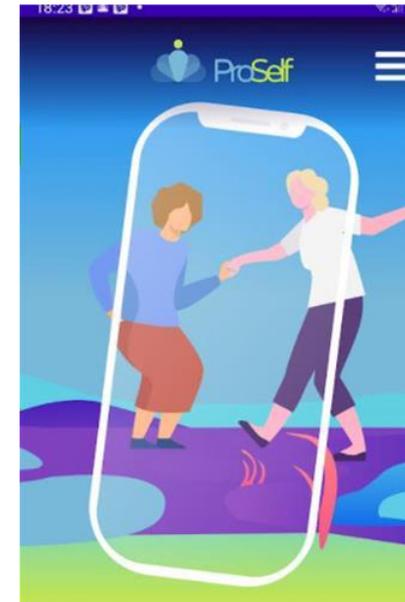

Targeted app users are adults aged 50+ from Austria, Germany, Switzerland, the Netherlands, Belgium and Sweden.

## We developed a well-being application and on-line community platform.

ProSelf is a digital well-being application and social platform, which helps users to live an **active**, **connected** and **healthy** life with science-based measurement tools and well-being activities.

It is built on the science of Positive Physiology and Machine Learning.

**ProSelf.**  
**We are for YOU.**

ProSelf is a well-being app for people who would like to live a healthy, active life in their golden years.

# Proself helps focusing on the individual and social well-being

# By completing the questionnaire, you can get your well-being plan tailored to your needs

**My well-being**

1: I take the time to think about what's important in life - who I am, what I value, where I belong and where I go.

100%

fully disagree neutral fully agree

2: I feel strong, I am resilient, I recover quickly after a disappointment or problem.

100%

fully disagree neutral fully agree

3: I recognize when I am stressed and take steps to deal with it (e.g. exercise, meditation,...).

0%

fully disagree neutral fully agree

**Based on the results of the questionnaire, we propose the distribution of the activities shown in the individual areas. The higher the value, the more often you will receive an activity from this area. You can also change these values with the +/- buttons.**

Social well-being Physical well-being

Physical well-being Emotional well-being

**Individual exercise**

**Find the beginning!**

50 ☆

Selling a task into three parts (front, middle, end) can make it much easier, easier to manage. Once you know how to start, you will be much more motivated to accomplish it. And when you're done, rejoice and pull it off your list!

Think of a task on your daily to-do list and describe how you will accomplish it in three parts. Select a task from your daily to-do list. Describe how you will accomplish it in three steps. Think about how you will start. For example, you need to collect some material for it, or you may need to consult with someone.

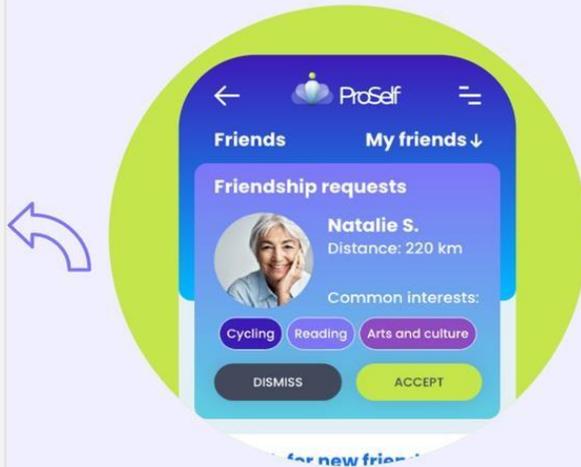

**COMPLETE YOUR WELL-BEING QUESTIONNAIRE**

**SET YOUR TARGET**

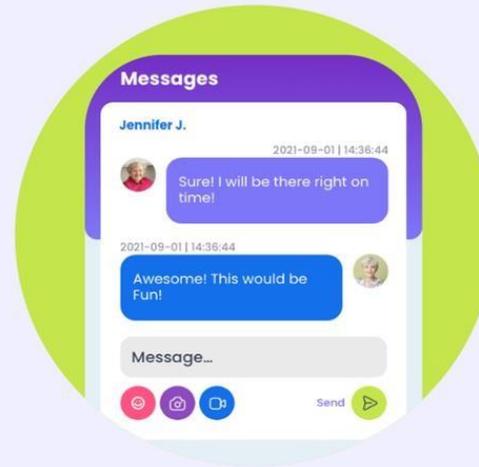

**START COMPLETING YOUR FIRST ACTIVITIES**

## Projects and Products by BYS Grup in the Thematic Area of Elderly Care

- (COGNIPLAT): A Gaming PLATform for Restoration of COGNItive Functions of the Elderly People
- Elder Tablet (ELTAB): a mobile-based health care and social inclusion system for elderly people
- Alz-E-Med: E-Medical Primary Care System for Alzheimer's Patients (ALZ-e-MED)
- RODE: AI Based E-Care System to Support Patients with Dementia

**Contact:**

<https://www.bysgrup.com.tr/>

[baris.ucar@bysproje.com](mailto:baris.ucar@bysproje.com)

[info@bysproje.com](mailto:info@bysproje.com)

**ALZ-e-MED** is a product developed for providing services to Alzheimer patients and their caregivers with Europe and North America.

[www.alzemed.com](http://www.alzemed.com)

### GENERAL FEATURES

**Rehabilitation Module**

8 games operating the functions of Memory development, attention, arithmetic, language and object recognition

**Education Module**

19 training videos including the basic information regarding the Alzheimer patient care and prepared by the advisors

**Health Module**

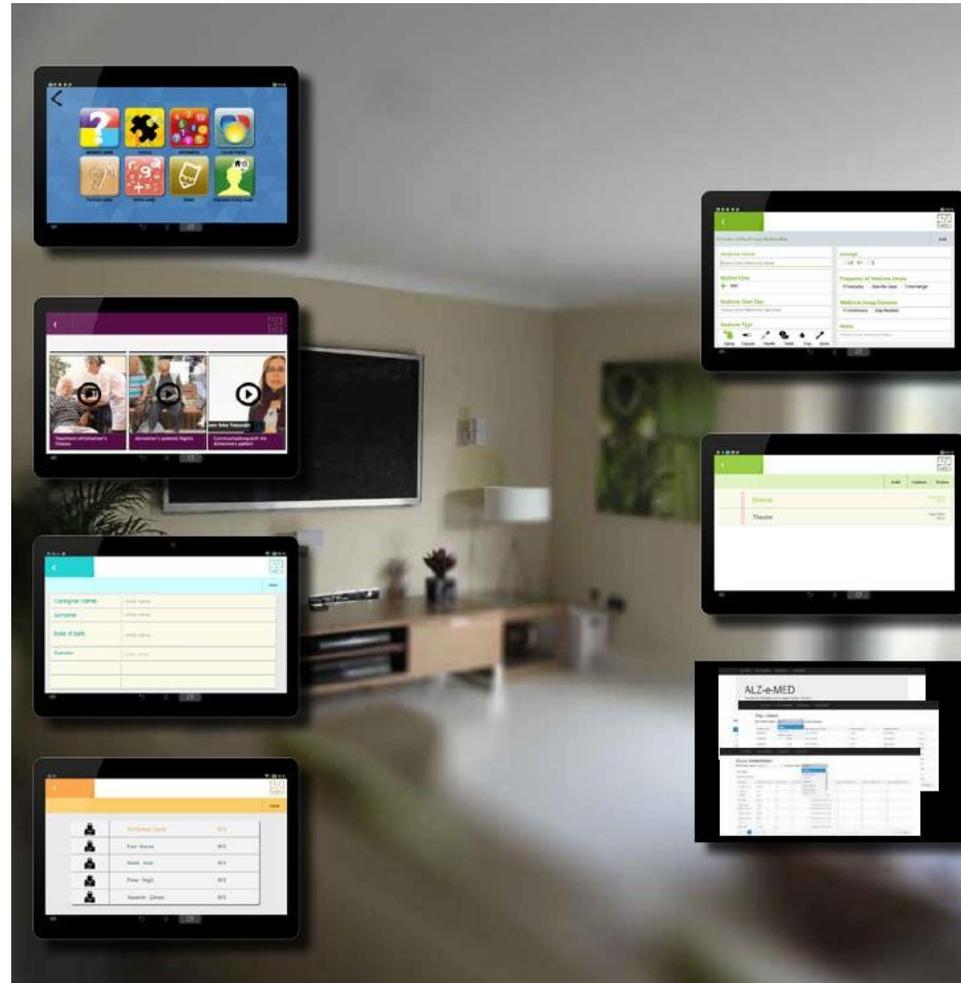

Medication reminder, activity reminder, health forms, authorization of medical staff

The games specifically developed for Alzheimer patients measure the functions of attention, arithmetic, visual-spatial skills, language, object recognition, memory development and adaptation to social life.

Relatives of patients with Alzheimer's disease often with periodical receive trainings about Alzheimer's under the supervision of a doctor. With ALZ-e-MED, in addition to periodic trainings, with the help of training videos, care-givers also benefit from the continuing education model within the solution.

The health data of the users are simultaneously shared with the doctors by means of health forms.

The management of medical staff enables the authorization of the staff who will follow up the data belonging to the user of the device through the web-based system. Unauthorized web users cannot see and report the data of the patients or elderly persons.

The medication reminder application enables to register the medication in accordance with the type, dosage, utilization period, and utilization frequency of the drugs. Moreover, the users may see the weekly medication calendar and drug lists drawn up according to the everyday utilization, and the system reminds them to take the registered drugs.

By means of activity reminder application, the patients may easily follow up their daily programs and appointments, and they may set alarms for recalling them.

ALZ-e-MED monitoring and evaluation system enables the doctors or medical staff to access and report the data of the patients accumulated via health forms, medication reminder application, games/tests in ALZ-e-MED tablet and smart TV by means of web application.

## Benefits to Patients

Problems encountered by patients	Solutions produced by ALZ-e-MED
Leaving home for consultation	Follow-up of the patients at home
Inadequate care for patients	Briefing and orientation of caregivers
Provision of useful activities in patients' care from different environments	These activities are gathered in one environment
Uncontrolled and unconscious utilization of drugs	Drug intake will be controlled by the doctors
Amnesia	Reminder Application

## Benefits to Doctor / Medical Staff

Problems encountered by doctors	Solutions produced by ALZ-e-MED
Not able to communicate with the desired patient in the required time	Continuous follow-up of the patients <ul style="list-style-type: none"><li>• Follow-up of test results</li><li>• Follow-up of medication</li></ul>

## **RODE: AI Based E-Care System to Support Patients with Dementia**

**RODE, an R&D project with a focus on technology transfer to SouthEast Asia with pilots in The Philippines and Indonesia also with strong focus on varying needs in the partner countries, aims to:**

- enhance the scope of the e-care system to support Dementia including Alzheimer's,
- upgrade the e-care system with new ICT technologies,
- to add a tracking system to the existing system,
- to localize the e-care system for needs of target countries
- to carry out a pilot case

**RODE utilizes and upgrades ALZeMED infrastructure.**

## Software Imagination & Vision

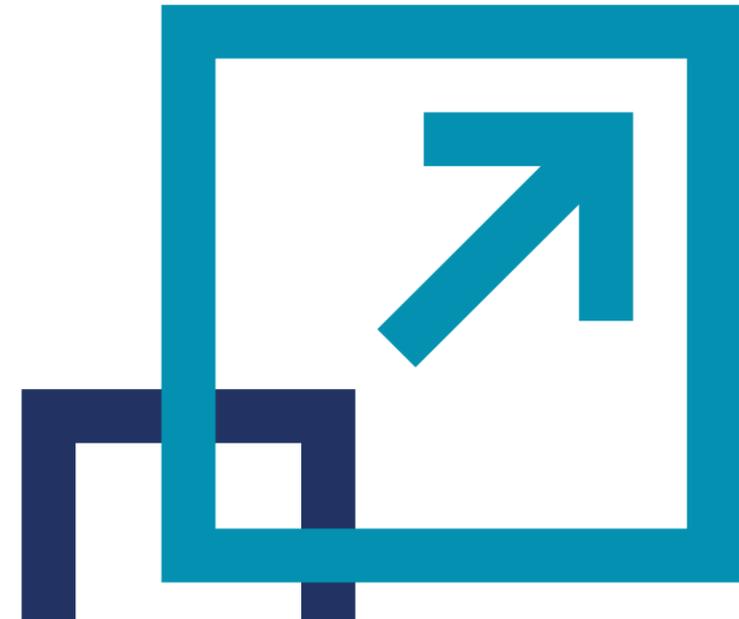

**Monica FLOREA**

Head of Unit European Projects Department

# ProKNX SAS

**Author: Christian Kiefel**

CEO, ProKNX SAS

This project has received funding from the European Union's Horizon 2020 Research and Innovation Action under Grant Agreement No 875452.

# Description of the organisation

**ProKNX SAS:** Innovative Leader In The Smart Home Sector

ProKNX is an IoT company which develops award-winning offline smart speakers that provide all the comforts of a cloud-based system while maintaining consumer privacy.

We have over 10 years of experience in developing innovative, prize-winning smart home devices for KNX Home Automation. ProKNX works in collaboration with Jung, Gira, and Sonos to produce high quality smart assistants for homes, hotels, and offices.

ProKNX has added unique features to their AI-based offline Private-By-Design Voice Controlled Smart Speaker to control the indoor environment and keep solo inhabitants safe.

## Cooperation idea

### ProKNX SAS: Changing the face of integrated retirement living

We are looking for partners who work in the sector of integrated retirement care, and also for entities that work in the areas of independent and connected living.

We would like to test and expand on the special developments we have added to our smart speakers for seniors, such as the «call for help» feature, and the intelligent monitoring capacity of our device. We are looking for companies interested in creating interoperable systems with their products to be able to offer a full solution for assisted living.

## Expertise request

ProKNX SA: looking for partners

At this stage in the ProKNX development, we are primarily looking to expand sales. This could be through investors and/or partners wanting to extend their offering by including the ProKNX smart speaker, Aragon, in their portfolio.

The ProKNX Team

**Christian Kiefel:** CEO - has had nearly 30 years of experience in the automation sector. His curiosity, and drive to make a difference in the world led him to found ProKNX 15 years ago.

**Jens Kastensson:** CTO - has a long experience of developing high-quality software products, applications and systems for major companies. His desire to innovate caused him to join ProKNX over 7 years ago.

*Heart rate calculation algorithm: Pan - Tompkins*

## Breathing rate

Acquisition through textile strain gauge integrated in the textile unit

*Signal sampling frequency: 13Hz*

## Posture and movement

Acquisition through MEMS 3D triaxial accelerometer

*Acceleration range:  $\pm 2g$*

## SPECIFICATIONS

**Dimensions:** 73x53x15 mm

**Weight:** 31 g

**Communication:** Bluetooth® v4.2 Low Energy

**Power supply:** 600 mAh capacity internal LiPo batteries rechargeable with NFC technology

**Battery duration:** 30 hours with continuous transmission

**Operating life:** without battery change: 2 years (>500 measurements)

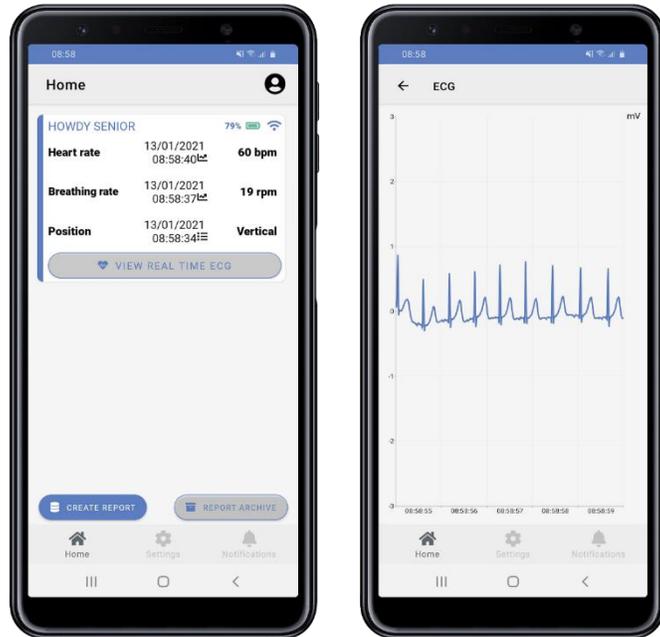

**Degree of protection:** IP 22

**Risk class:** IIb

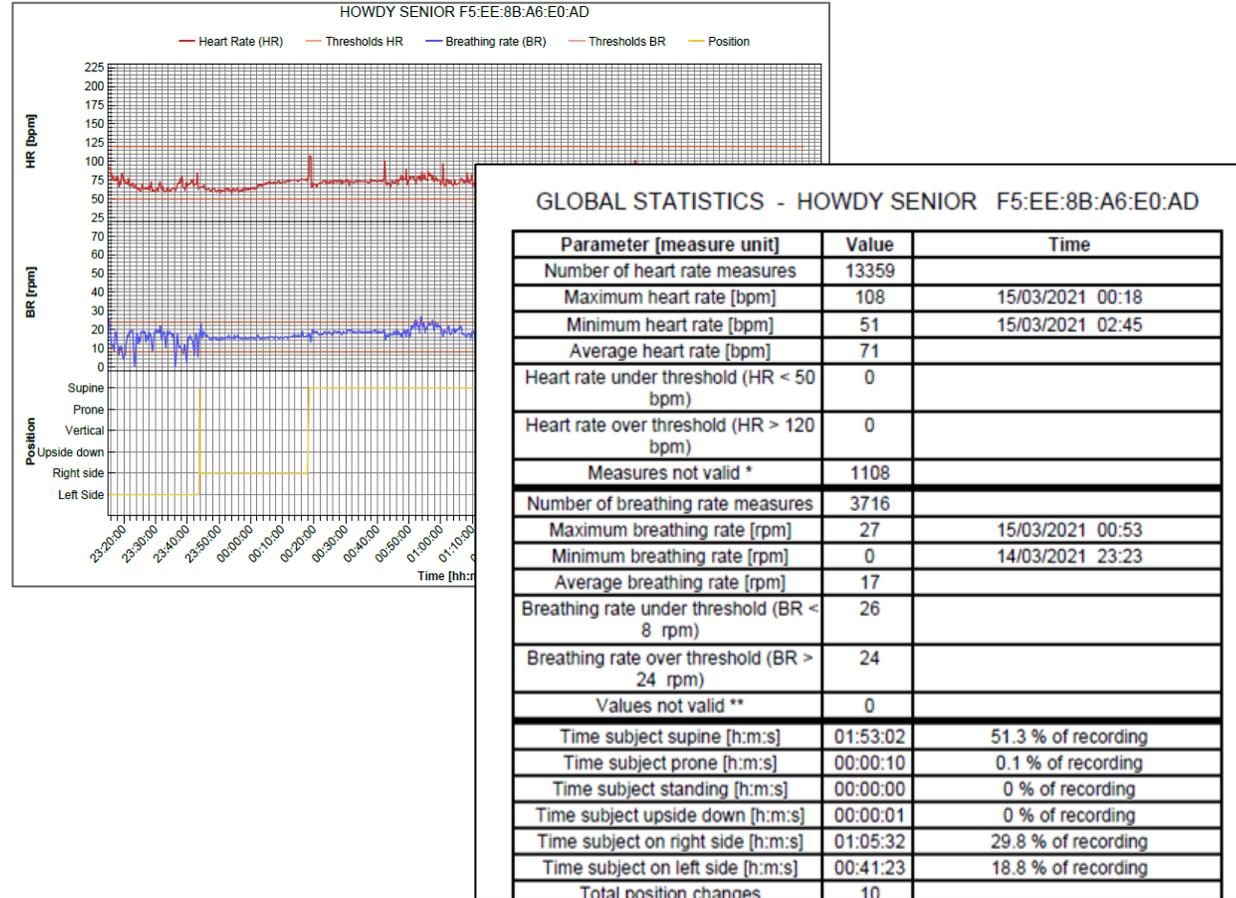

The app displays the parameters of:

- Heart rate (bpm)
- Real-time ECG (graphic)
- Respiratory rate (rpm)
- Body position

Available for Android 8.0 or later

The app can generate reports on the monitoring period that can be easily shared.

# PROJECTS

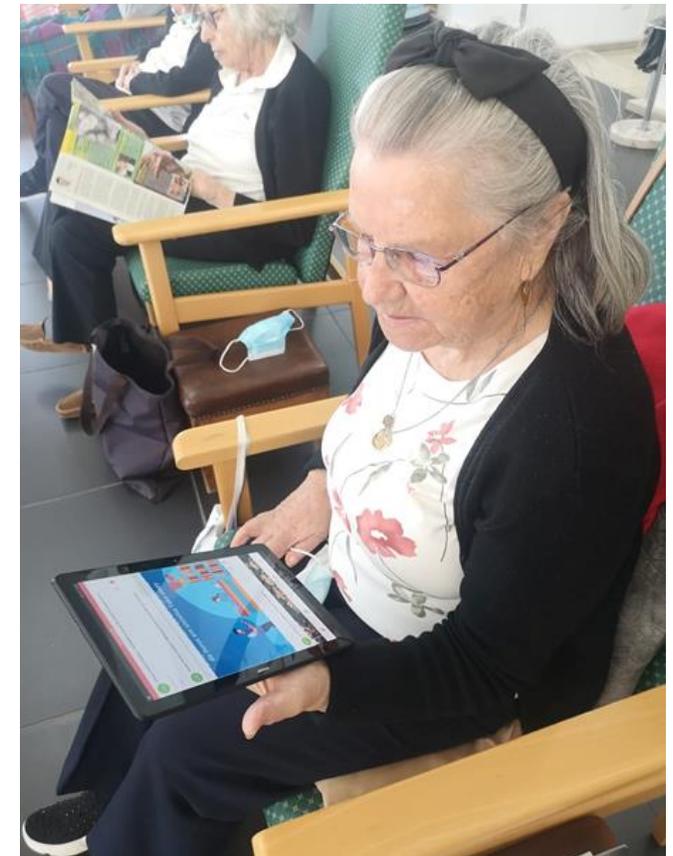

TOILET4ME

Over the past decade, many (open) platforms and solutions have been developed and tested to use innovative technologies to help older citizens live independently in their homes as long as possible. These open platforms should support older people in the main problems that have arisen with the demographic increase in Europe.

In that sense platforms/ solutions should improve:

- **Older adults' autonomy** – helping them to manage their daily activities.
- **Socialization** – helping them to get in contact with their families, caregivers, or friends.
- **Feeling secure** – helping them to ask for help if an issue happens.
- **Healthy ageing** – creating an inclusive environment that enables older people and persons with disabilities to live independently and stay active longer in society.

With the lack of caregivers, due to the exponential increase of older people, technology must be a support tool, not to replace personal contact, but to provide the user with greater autonomy. In that sense platforms/ solutions should provide:

- **A personalized service** - Focus of care is centered on the user's needs and wishes.
- **Relaxed care** – it is very important the caregiver have constant feedback about older adults.
- **Reduction in the caregiver burden** – helping manage tasks.
- **Integration of services/ solutions at the same platform.**

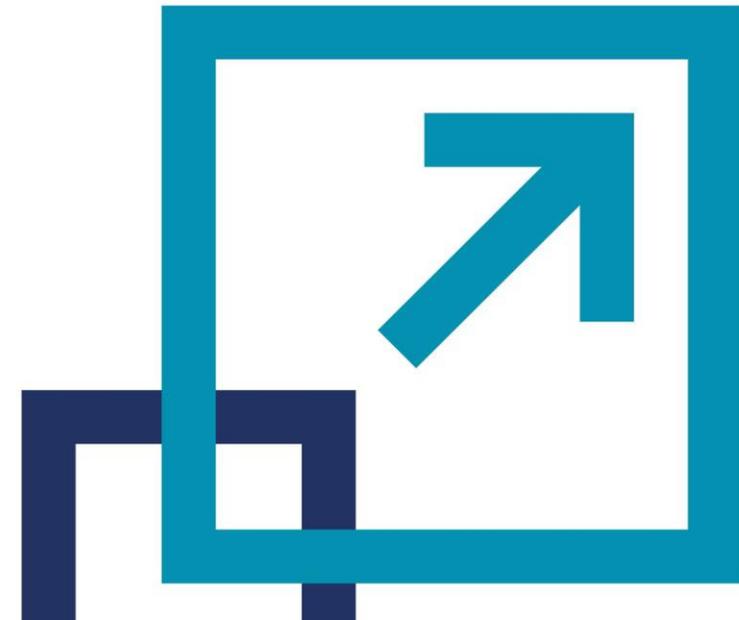

## Angel Rodriguez

Head of Digital Transformation/Atendo

This project has received funding from the European Union's Horizon 2020 Research and Innovation Action under Grant Agreement No 875452.

## Description of the organisation

Enter subtitle here

Atendo is a 20 years old innovative company. Our main goal is to help people staying at home as long as possible.

We look after 3.000 elderly people with a team of 500 care professionals in our services.

We led 2 R+D+i projects co-financed with European funds in 2018 and 2019.

Atendo is part of the IN-4-AHA Living Labs network. We are testing two products in this year.

Atendo is the ideal partner to test products and services with end users related to the elderly and active aging.

## Cooperation idea (if applicable)

Enter subtitle here

We are interested in discovering and testing new technologies and solutions.

Our main interest are based on integrated care, independent and connected living, technologies that help teams to make their jobs easier.

## Expertise offer (if applicable)

Enter subtitle here

*We provide services in nursing homes, day care centre, home care, clinics and therapeutics units, our team is made up of caregivers, social workers, occupational therapists, physiotherapist, psychologists, doctors, neuropsychologists, engineers, among other professionals.*

# SoCaTel project. H2020. EC. Coordination. Rovira i Virgili University

## Blanca Deusdad

Coordinator SoCaTel project.  
Associate Professor. Rovira i Virgili University

This project has received funding from the European Union's Horizon 2020 Research and Innovation Action under Grant Agreement No 875452.

# Description of the organisation

SoCaTel: A multi-stakeholders co-creation platform for better access to long-term care services. H2020 project GA 769975

SoCaTel aims at advancing the accessibility, responsiveness, efficiency, transparency and transferability of social and care services through digital co-creation.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant Agreement No 769975

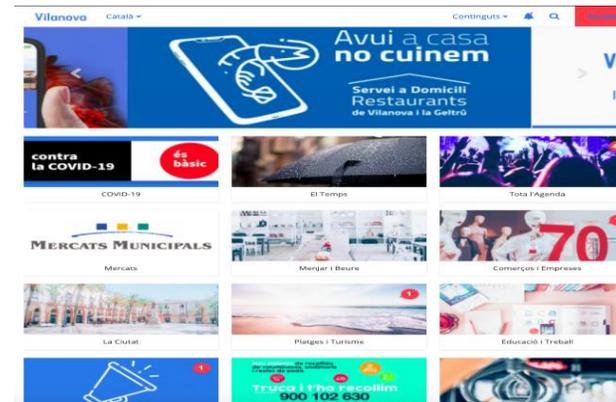

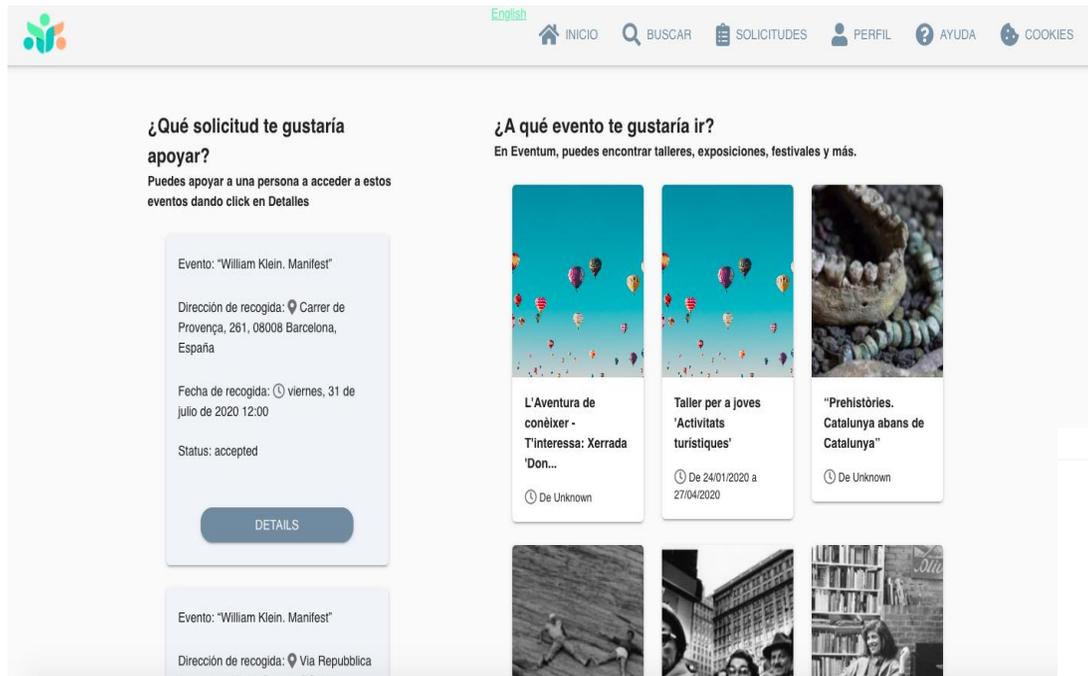

UNIVERSITAT ROVIRA I VIRGILI

# Cooperation idea (if applicable)

## SoCaTel Apps

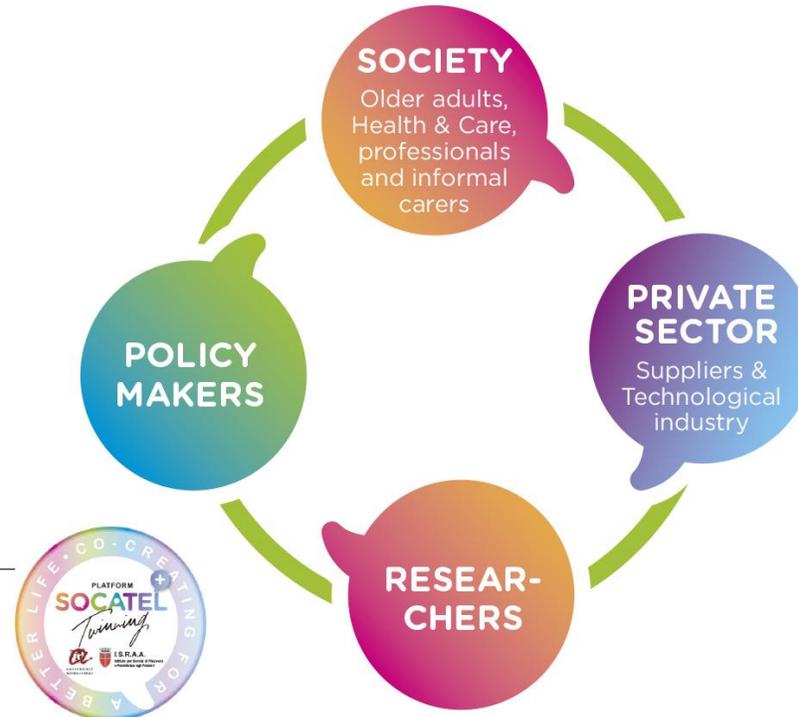

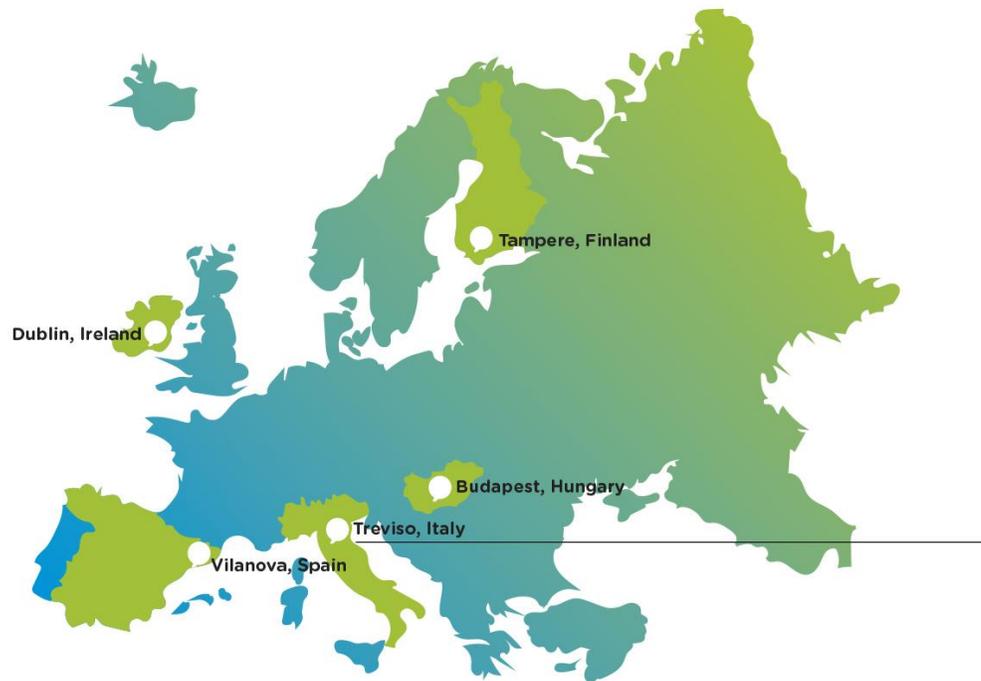

The SoCaTel platform facilitates the co-creation of long-term care services addressing emerging needs and encouraging bottom-up innovation, facilitating integrated care and inclusive living.

# Expertise request (if applicable)

Quadruple Helix Approach (Carayannis & Campbell, 2009)

We are looking to carry out digital co-creation with the aim of co-creating new digital solutions to overcome any need identified by all stakeholders, such as improving older adults community participation, overcome loneliness or improving integrated care amongst others.

Healthcare and home care, so as to improve fields such as integrated care and ageing-in-place

## The benefits of SOCATEL

- Inclusive:**  
involving all stakeholders, especially service users
- Cost-efficient:**  
digital co-creation eliminates the need for travel; targeted services co-created by stakeholders make better use of resources
- Open-source and modular:**  
any organisation can adopt the entire platform or individual modules for free. Licence: APACHE 2.0 - [github.com/SoCaTel](https://github.com/SoCaTel)
- Open access:**  
most of SoCaTel's work process and outcomes are available to the public: [www.socatel.eu/category/publications](http://www.socatel.eu/category/publications)
- Compliant with data protection regulations:**  
SoCaTel protects participants' privacy in full compliance with GDPR:  
[www.socatel.eu/wp-content/uploads/2020/04/SoCaTel-D7.5.pdf](http://www.socatel.eu/wp-content/uploads/2020/04/SoCaTel-D7.5.pdf)

## Is your organisation interested in co-creation and/or the SOCATEL platform? Get started with these resources:

# OpenRemote – The 100% Open Source IoT Device Platform for OEMs

Matchmaking PlatformUptake - January 2022

# What we do

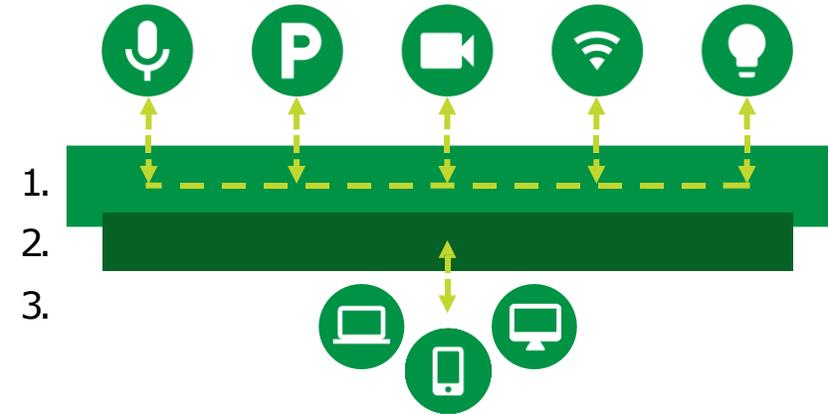

---

1. We let systems talk to each other  
Systems which do not know each other and don't speak the same language
2. We add intelligence  
By reading and writing to devices, we can do smart things
3. We focus on end-users  
Our goal is to make life easier for end-users, with everybody having his own application

## Our uniqueness

- We do this 100% open source  
No vendor lock-in, safe and transparent
- Intuitive and complete platform  
Non-technical users can create automation, manage devices, and gain insights
- Full service, proven with credible customers  
Development, design, and project management. Together with the customer.

113/6

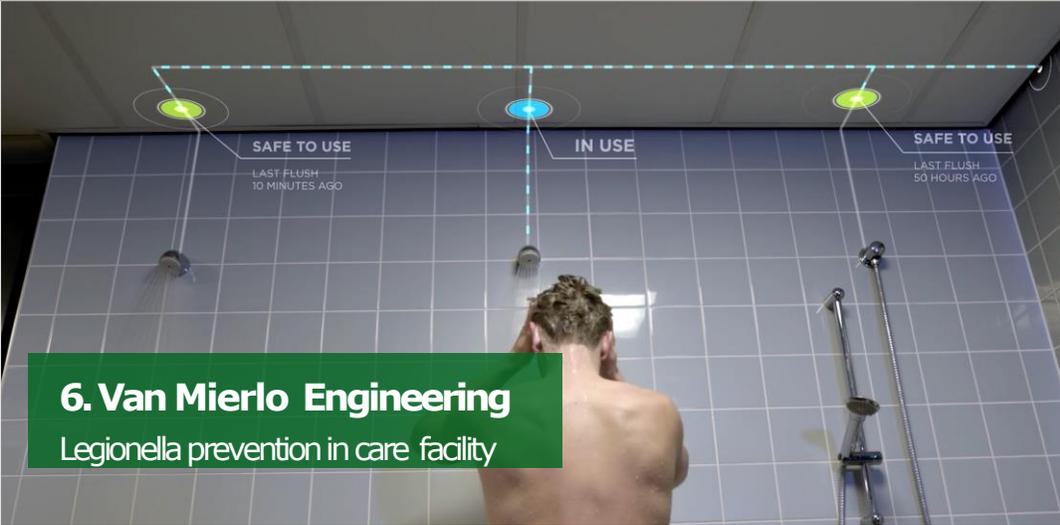

# Reference customers

---

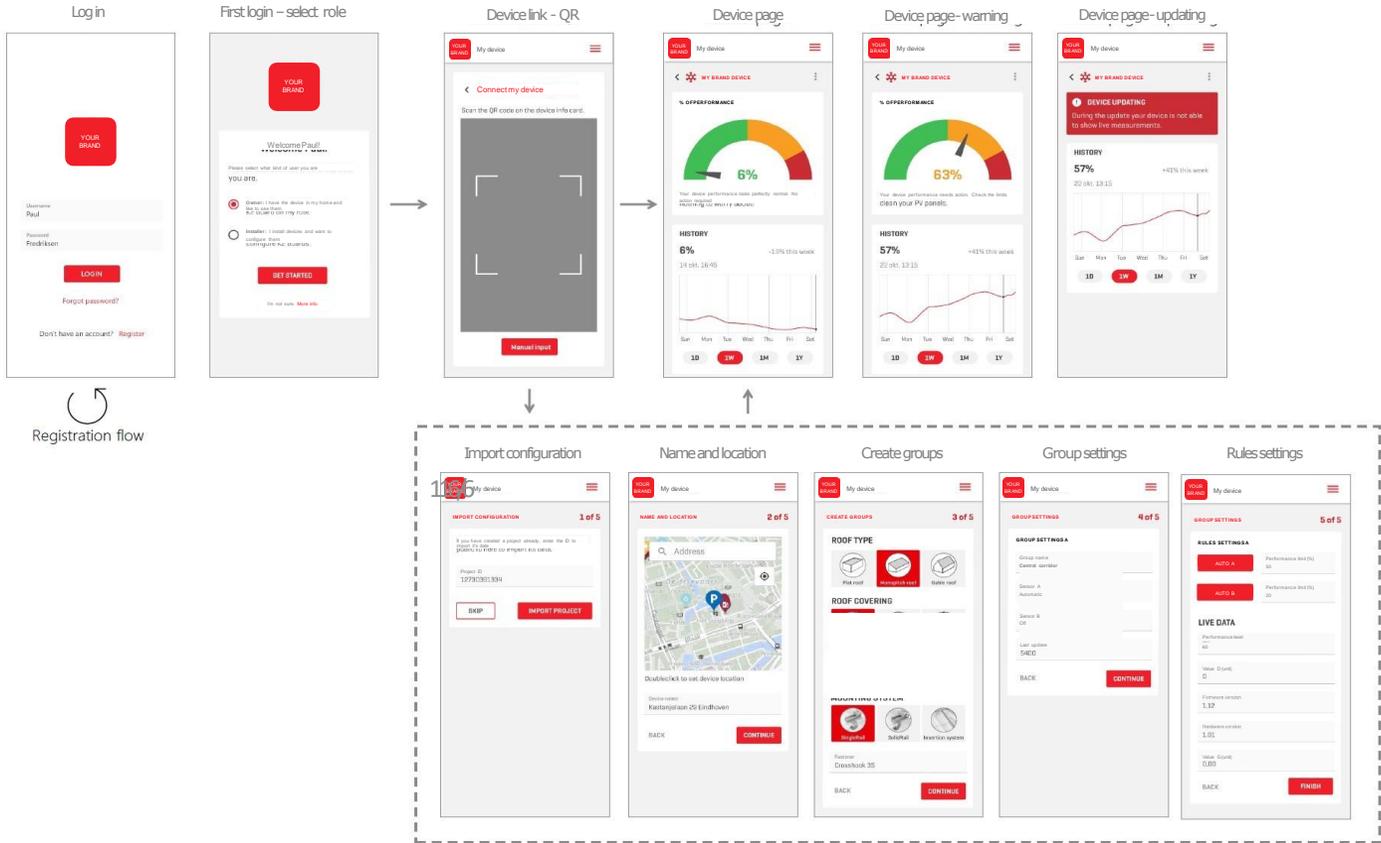

# Reference customers

# Main platform features

- Generic asset and attribute model**  
 Configure your own asset model for your products or devices to represent them as digital twin
- Protocol Agents and Manager APIs**  
 Generic protocols and API to connect devices and services, and connect them as assets
- Rules and logic**  
 Develop your own logic using When-Then rules, Flow editor or Groovy
- Auto device provisioning in factory**  
 Provision your hardware to automatically register in the platform when powered on at your customer
- Your branded customer applications**  
 Through a web component library, the iOS and Android consoles you build your own apps
- Multiple realms, tenants, restricted users and roles**  
 A full account management and identity service for multilayer access for your distributor and end-user
- Firmware management**  
 Manage firmware rollouts of your products synchronized with your platform

## Project Impact

Societies, science, industry and health

- Independent living, and improved quality of life of older persons compared to the current State of the Art
- Usefulness and effectiveness of personalized recommendations and follow-up in terms of goals of preserving physical, cognitive, mental and social wellbeing for as long as possible
- Evidence of user-centred design and innovation, effective ways of human computer interaction, and user acceptance
- Fostering social participation and reducing social exclusion's risks of older adults
- Validation of non-obtrusive technology for physical, cognitive, social and mental wellbeing
- Strengthened international cooperation in research and innovation on Smart Living for AHA

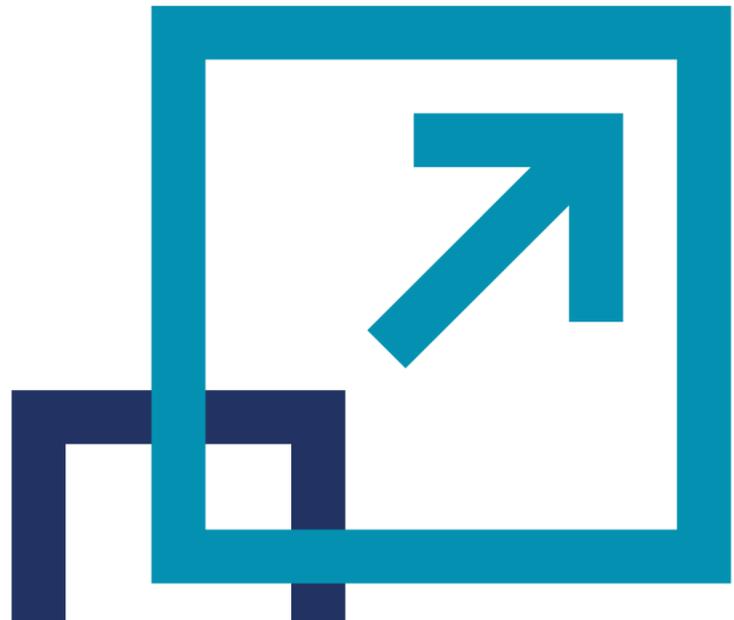

# SMARTBEAR project

**Eleftheria Vellidou**

WP13 leader on dissemination and exploitation

This project has received funding from the European Union's Horizon 2020 Research and Innovation Action under Grant Agreement No 875452.

**SMART BEAR** project will deliver a solution offering:

- Continuous and objective monitoring and interventions for precise and personalised medicine towards optimising disease and associated risks' management
- Measurable improvements to the Quality of Life of the elderly and their ability to live independently

The **SMART BEAR** solution will

- Integrate off-the-shelf smart consumer and medical devices to provide a Connected Health environment,
- Provide an affordable, user-friendly, and accountably secure and privacy-preserving service to the elderly, and
- Increase the efficiency of healthcare delivery and reduce resource waste

## Cooperation idea (if applicable)

Enter subtitle here

Digital tools hold promise for many health benefits that can enhance the independent living and well-being of the elderly. Yet, their use is often perceived to have technological and privacy risks.

We are interested in cooperating with organisations developing and providing digital tools targeting the domain of independent living or mitigating privacy and data security risks due to increased connectivity

## Expertise request (if applicable)

Enter subtitle here

Software and application development notably from European based SMEs is in SMARTBEAR's main interest.

An open call will be organised and be put forward with detailed requirements targeting the SME market active in independent living domain and beyond, as part of the project's valorisation plan.

## Expertise offer (if applicable)

Enter subtitle here

SMARTBEAR stands for Smart Big Data Platform to offer Evidence Based Personalised support for Health and Independent Living at home.

The consortium consists from 27 participants across Europe, is lead by ICAR /CNR – Italy and it will offer its services to more than 5.000 patients in various sites.

# Hippocrates Technologies

**Marco Foschiano**

CEO

This project has received funding from the European Union's Horizon 2020 Research and Innovation Action under Grant Agreement No 875452.

Hippocrates Tech is a startup specializing in digital health development tools for mobile and cloud-based solutions.

Our open TheraForge software development kit (SDK) and BaaS platform is a rapid application development (RAD) solution for advanced offline-first server-less mobile and web-based eHealth solutions.

In particular, our SDK and cloud platform are geared toward implementing cloud-based TeleCare/TeleHealth solutions that support 100% remote doctor-patient consultations and care plan management (especially critical during epidemics such as COVID-19 and influenza, for the safety of both the patient and the doctor).

It can also be employed to implement large-scale medical research/telehealth apps for health condition monitoring and reporting (essential in the aftermath of an epidemic for large-scale retrospective epidemiological studies or patient monitoring).

# Integrated/Virtual/Connected Care

We are looking for cooperation opportunities in integrated/virtual/connected care and in the areas of healthy living and digital therapeutics (DTx).

## Expertise request/Expertise offer

We are looking for cooperation opportunities in any of the following areas: investment, software & app development, implementation of digital solutions for active and healthy ageing, upscale of digital solutions for older people...
